

# Portfolio website

...

It's the learning process the counts right?

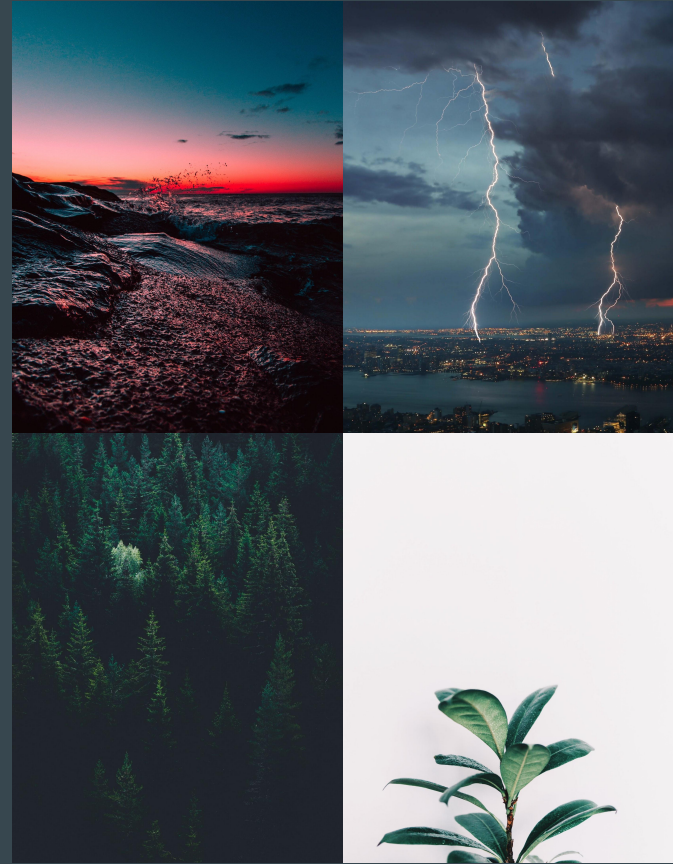

# Design phase

Initially planned an idea that seemed rather doable but ambiguous only to fall short in implementation.

Scrapped idea numero uno move onto secondary design

Wanted to create an organic feeling site that was also inspired by love of tech and the natural world

However....

# Disaster ?

Much like the Frodo I wasn't aware just how perilous this adventure would be. Without a Sam of my own the initial ideas were doomed to failure luckily I didn't have to climb a fiery mountain and be stabbed by some shabby old goth to scrap the ideas, burn the code.

I had the eventual good sense to not `rm -rf /*` and here we are...

## Challenges and Enjoyment

Numerous, arduous, painful, exhausting

Namely specificity, the fickle nature of css, time constraints, other humans

Few, joyful, educational, unicorns

The surprising power of CSS3, the increase in knowledge base when these occurred, did I really enjoy it?

Questions?

Dead god no : )

Will link in slack  
later today
